

# 2022-2023 AP Environmental Science SUMMER ASSIGNMENT

## Welcome to AP Environmental Science!

Welcome to AP Environmental Science, commonly known as APES! I'm looking forward to working with you next year. APES is an advanced interdisciplinary science course that prepares students for the national AP Environmental Science exam, using a college text and requiring college level skills. A passing score on the AP exam may qualify the student to by-pass a semester of a first-year college environmental science course. The course has college level expectations for behavior, participation and effort. Environmental science is an immense field of study. In order to cover all the material for APES before the exam next May and get you to start thinking environmentally, you will need to complete the Environmental Case Studies assignment during the summer. Please download the [word doc](#) and type responses in YOUR OWN WORDS. Please do not copy and paste from any source. Print and bring your work to turn in the first day of class. You will have a quiz over them during the first unit of the course.

If you have any questions, you may email me at [dcooper@oconeeschools.org](mailto:dcooper@oconeeschools.org).

Have a great summer!

-D. Cooper
